WORK EXPERIENCE

Software Quality Assurance Intern— *LifeVantage*

SEPTEMBER 2025 – PRESENT

Performed manual software testing. Wrote automated testing scripts using Mabl software. Maintained documentation of testing progress through Jira and AIO tests.

EDUCATION

Utah Valley University, Orem, UT — *Bachelor's in Computer Science, Emphasis in Full Stack Web Development*

DECEMBER 2025

Projects

Let's Eat — *Full Stack Web Application*

[Git repo](#) | [Figma](#) | [Video Demo](#)

A full stack web application that allows users to browse and search for restaurants on a map view. Users can save restaurants into custom created folders. Users can then rate and review saved restaurants for their later reference. Created with React, Google Maps API, PostgreSQL, and Python's FastAPI.

Loops and Knots — *Full Stack Web Application*

[Git repo](#) | [Figma](#) | [Video Demo](#)

A full stack web application that allows users to browse and save both yarn and patterns for knitting or crocheting. Users can filter and search for yarn or patterns. Users can view and delete their saved items. Hosted on AWS for a period of time. Created with React, Ravelry API, PostgreSQL, and Python's FastAPI.

Shopping List Manager — *Mobile App*

[Git repo](#) | [Video Demo](#)

An Android mobile application that allows users to manage their shopping list, pantry, and recipes all in one place. Users can view, create, edit, and delete pantry items and grocery list items. Users can browse and save recipes or create their own recipe. Created with Kotlin and TheMealDB API.
